13. Troubleshooting

SECTION 1 — Getting Started

MyDepotMaster (MDM) is a mobile-first business management app that works on any Android phone or modern browser. It requires no installation from an app store — you can install it directly from Chrome or download the APK file.

1.1 Installation

Step	Description
1 — Visit Landing Page	Visit rebrand.ly/mydepotmaster . Tap Open Web App → or Start Free Trial to launch the app in your browser.
2 — Install as App (Recommended)	In Chrome on Android, tap the three-dot menu and select "Add to Home Screen" or "Install App". MDM appears on your home screen and opens fullscreen like a native app.
3 — Download APK (Android)	On the landing page, scroll to the Download section and tap Download APK. Install on your Android device — you may need to allow installation from unknown sources in your phone settings.
4 — Desktop / PC	Visit rebrand.ly/mydepotmaster on any desktop browser and tap Open Web App →. Fully functional on PC and laptop screens.

1.2 First-Time Setup

Step	Description
1 — Company Details	Enter your Company Name, District, and Country. These are your unique app identifiers and cannot be changed later without contacting support.
2 — Create Admin Account & Set Currency	Set a username and password for the Admin account. Enter your Currency (e.g. ZMW, USD, K) before completing registration. A recovery email can optionally be set here. Your 1-month free trial starts immediately — no credit card required.

■ After signing in, go to Settings → Commodities to add your commodities (e.g. Maize, Wheat, Rice). No commodity is pre-loaded — you define all of them.

■ Your Company License Key (format: MDM-XXXX-XXXX-XXXX) is generated automatically and shown in Settings → License. Keep a note of it — you will need it to subscribe.

1.3 Signing In & Out

Feature	Description
Sign In	Enter your username and password on the login screen. Tick "I agree to the Terms" then tap Sign In.
Forgot Password	Tap "Forgot Password?" on the login screen. Reset using your Recovery PIN or recovery email (if set up).

Feature	Description
Sign Out	Tap your profile icon in the header, or the logout button in Settings.
Biometric Login	If your device supports fingerprint/face unlock and you have previously signed in, a fingerprint button appears on the login screen. Register biometrics under Settings → Security.
Account Switcher	The login screen shows previously signed-in accounts as avatars. Tap any avatar to pre-fill the username and switch accounts quickly.
Auto Logout	MDM logs you out after a configurable inactivity period (default 10 minutes). A warning appears before logout. Configurable in Settings → Staff & Records Policy.

1.4 User Roles

MDM supports three access levels. An Admin sets up the system and manages all data. Managers can view and record data but cannot delete or change settings. Staff have the most limited access.

Role	Description
Admin	Full access: create/edit/delete all records, manage user accounts, configure roles & rates, access Settings, view all reports.
Manager	Can record received stock, issued stock, inventory, work logs, and payments. Cannot delete records, manage commodities/items, or access Settings.
Staff	Can view their own work logs and earnings. Cannot add, edit, or delete records. Read-only access to most data.

■ All users can change their own password. The built-in Role Permissions table in Settings provides a complete feature-by-feature breakdown.

1.5 First-Run Checklist

Step	Action
Add a Commodity	Go to Settings → Commodities and add your bulk goods (Maize, Wheat, etc.).
Set Currency	Settings → Display Preferences → Currency. Enter your currency symbol or code.
Add Staff	Settings → User Accounts, or Staff tab → + Add Staff.
Define Roles & Rates	Staff → Roles & Rates. Set up job roles, tasks, and pay rates.
Set Recovery PIN	Settings → Recovery PIN. Protects against forgotten Admin password.
Test Cloud Sync	Settings → Cloud Sync → Test Connection.

SECTION 2 — Dashboard

The Dashboard is the home screen after login. It gives you a real-time overview of your entire operation at a glance.

2.1 Overview Metrics

Metric	Description
Commodities Overview	All defined commodities shown with individual balance bars: total received, total issued, and stock balance for each.
Commodities In/Out Today	Total units received and issued across all commodities today.
Staff Earnings	Net earnings for all staff in the selected time period (gross minus deductions).
Inventory Items	Number of distinct inventory items tracked in the General Inventory.
Today's Activity	Quick count of records entered today: stock in, stock out, inventory receipts, staff logs.
Credit & Debt Totals	Dashboard shows total outstanding credit (you owe suppliers) and debt (customers owe you) from both Commodities and Inventory tabs.

2.2 Period Filter

Use the period buttons at the top to filter dashboard numbers by: Daily, Weekly, Monthly, Yearly, or All Time. A custom date range picker is also available.

2.3 Alerts & Warnings

The dashboard automatically flags issues that need your attention. A red warning box appears when any of the following are detected:

Alert Type	Meaning
Stock Variance	Physical count does not match the system-calculated balance.
Negative Balance	More stock issued than received for a commodity or inventory item.
Bag Count Mismatch	Staff work logs show a different bag count than stock received.
Pending Payments	Staff have unpaid earnings outstanding.
Low Stock	An inventory item balance is at or below its configured minimum stock threshold.
Expiring / Expired Stock	An inventory item batch is within 30 days of its expiry date, or has already expired.
Credit Debts	Issued stock or inventory items are marked as "Credit" (customer owes you).
Subscription Expiry	Your trial or subscription is within 10 days of expiry.

■ Resolve warnings promptly. A stock variance usually means a physical count was done but stock movements were not recorded, or vice versa.

2.4 Quick Actions

The Dashboard provides quick-action buttons for the most common tasks: Record Stock In, Record Stock Out, Log Work, and Print Summary. These open the relevant forms without navigating to a tab.

2.5 Dashboard Widgets

Admins can customise which summary cards appear on the Dashboard. Each widget (Commodities, Inventory, Staff Earnings, etc.) can be toggled on or off via the widget management option. Widgets can also be reset to their default layout.

2.6 Global Search

Tap the floating search button (visible on all tabs after login) to open a full-app search. MDM searches across commodities, inventory, staff logs, contacts, and books simultaneously, returning matched results grouped by category.

SECTION 3 — Commodities Tab

The Commodities tab tracks bulk goods such as Maize, Wheat, Fertilizer, or any commodity you define. Each commodity has its own received, issued, stock count, transport log, and financial summary records. No commodity is pre-loaded — the Admin defines all commodities in Settings → Commodities after signing in.

Switch between commodities using the commodity selector at the top of the tab. Each commodity maintains completely separate records.

3.1 Received Sub-tab

Field	Description
Batch Name	A name for this delivery batch (e.g. BATCH-001, FRA JUN 2026). Batches help you track individual consignments.
Date	Date the stock was received.
Qty Received	Total quantity delivered (bags, tonnes, etc.).
Good / Damaged	Breakdown of condition on arrival.
Unit Price	Purchase price per unit. Used for cost tracking and profit calculations.
Payment Status	Mark each receipt as Paid, Partial, or Credit (owe supplier). Partial payments record the amount already paid. Credit entries appear as alerts on the dashboard.
Notes	Optional field for transporter name, waybill number, etc.

■ Records can be edited within the configured edit window (default: 24 hours) by an Admin. After this window they become permanent. The edit window is adjustable in Settings → Staff & Records Policy.

3.2 Issued Sub-tab

Field	Description
Batch Name	Select the batch from which stock is being issued.
Date	Date of issue.
Transporter	Name of the transporter or recipient.
Qty Issued	Number of bags/units issued from this batch.
Sale Price	Selling price per unit. Used for revenue and profit calculations.
Payment Status	Mark as Paid, Partial, or Credit. Credit sales (debts owed by customers) are tracked and shown in dashboard alerts.
Linked Contact	Optionally link the issue record to a customer in the Contacts tab for balance tracking.

3.3 Variance Sub-tab

Record a physical count of stock on hand. MDM compares your physical count against the system-calculated balance and highlights any variance:

Term	Formula / Meaning
System Available	Total Received – Total Issued (all-time per batch)
Variance	Physical Count – System Available
Shortage	Variance is negative (physical count is less than system says)
Surplus	Variance is positive (physical count is more than system says)

3.4 Transport Log Sub-tab

Log vehicle movements for commodity deliveries and dispatches. The Transport Log captures vehicle-level detail:

Field	Description
Date & Time	Timestamp of the transport movement.
Vehicle Reg	Vehicle registration number.
Driver Name	Name of the driver.
Commodity & Batch	Which commodity and batch is being transported.
Quantity & Unit	Amount being transported.
Origin / Destination	Where the vehicle is coming from and going to.
Status	Current transport status (e.g. In Transit, Delivered).
Notes	Additional notes such as waybill number.

3.5 Profit & Loss Sub-tab

A detailed Profit & Loss report for the selected commodity and period. Shows total revenue (from issues), total cost (from receives), gross profit, and a breakdown by batch. Filterable by Daily/Weekly/Monthly/Yearly/All Time.

3.6 Cash Flow Sub-tab

Displays cash actually received and paid out for the commodity — distinguishing between settled (paid) transactions and credit (outstanding) amounts. Useful for understanding actual cash position vs accrued profit.

3.7 Budget vs Actual Sub-tab

Admins can set budget targets (quantity and/or value) for a commodity over a period. The Budget vs Actual view compares these targets against real recorded data, showing variance and percentage achievement.

3.8 Summary Sub-tab

The Summary view shows aggregated financials for the selected commodity and period: total received, total issued, total cost, total revenue, gross profit, and stock balance. A per-batch breakdown is also available.

SECTION 4 — Inventory Tab

The General Inventory tab is for all other products your business carries: fuel, fertiliser, stationery, spare parts, or any item you define. Unlike the Commodities tab (which uses batches), inventory tracks items by name.

4.1 Recording Received Stock

Field	Description
Item Name	Select from your defined item list or type a new name.
Date	Date stock was received.
Qty Received	Total quantity received.
Good / Damaged / Rejected	Condition breakdown. Rejected items are excluded from available stock.
Purchase Price	Cost per unit. Remembered for future entries of the same item.
Best-Before / Expiry Date	Optional. MDM alerts you 30 days before expiry, and again when a batch has expired. Expiry alerts appear on the Dashboard.
Payment Status	Paid, Partial, or Credit. Tracks whether you have paid the supplier for this stock.
Linked Supplier	Optionally link to a supplier in the Contacts tab for balance tracking.
Notes	Optional notes.

4.2 Issuing Items

When you issue (sell or distribute) inventory items, record it in the Issued sub-tab. Enter the item name, quantity, selling price per unit, payment status, date, linked customer (optional), and any notes.

4.3 Stock Counts

Perform a physical count of any item by tapping + Stock Count. MDM calculates and displays the variance between your count and the system balance.

4.4 Item Names, Min-Stock & Reserved Qty

Admins pre-define the list of inventory item names in the Item Names sub-tab. This prevents spelling inconsistencies and speeds up data entry. Each item can also have:

Setting	Description
Minimum Stock Threshold	When the item balance falls to or below this number, a low-stock alert fires on the Dashboard.
Reserved Quantity	A quantity of stock set aside (e.g. reserved for a specific customer). The dashboard shows Available = Balance – Reserved.

4.5 – 4.7 Profit & Loss / Cash Flow / Budget vs Actual

The Inventory tab includes the same Profit & Loss, Cash Flow, and Budget vs Actual sub-tabs as the Commodities tab — scoped to general inventory items. See Section 3.5–3.7 for descriptions.

4.8 Financial Summary

The Summary sub-tab shows for each item: total received, total issued, total cost, total revenue, gross profit, and current balance. Filter by period using the Daily/Weekly/Monthly/Yearly/All buttons.

SECTION 5 — Staff Tab

The Staff tab manages your entire workforce: logging daily work, tracking earnings and deductions, recording payments, monitoring leave, managing warnings, and defining job roles and pay rates.

5.1 Work Logs

Field	Description
Staff Member	Select from your staff list.
Date	Work date.
Task	Select the task performed (defined in Roles & Rates).
Quantity	Number of bags, loads, or units completed (depending on task type).
Time In / Time Out	Optional start and end time. Sessions exceeding the configured Standard Shift Hours are flagged with an OT (overtime) indicator.
Earnings	Auto-calculated from quantity × pay rate. Shown as a preview before saving.
Deductions	Multiple deduction lines can be added per log entry. Each deduction requires an amount and a reason (selected from a configurable list).

5.2 Clock In / Clock Out

In addition to manual work log entry, MDM supports real-time clock-in/clock-out. Tap Clock In to start a shift for a staff member; tap Clock Out to end it. Earnings are calculated automatically from the shift duration and task rate. Overtime is flagged if the shift exceeds the configured standard shift hours.

5.3 Roster

The Roster sub-tab shows a calendar-style overview of who worked on which days, making it easy to spot absences and plan staffing.

5.4 Earnings

The Earnings sub-tab shows a running total for each staff member: gross earnings, total deductions, net earnings, total paid, and balance outstanding. Rows highlighted in amber indicate unpaid balances.

5.5 Payments & Payslips

Record payments made to staff by tapping + Pay Staff. Select the staff member, enter the amount paid, date, and optional notes. Payment rows are highlighted in green in the logs table.

Payslip Generator: From the Earnings view, tap Generate Payslip for any staff member. Select the pay period (month and year). MDM produces a formatted, printable payslip showing: earnings breakdown by task, deductions with reasons, gross, net, amount paid, and outstanding balance.

5.6 Leave Tracking

Log annual leave, sick days, and unexcused absences for each staff member. Each active staff member's leave balance is shown against their annual entitlement (configurable in Settings → Staff & Records Policy).

Type	Description
Annual Leave	Planned leave, deducted from annual entitlement.
Sick Day	Illness — tracked separately, does not affect annual balance.
Absent (Unexcused)	Absence without approval — counted as absences, not deducted from leave balance.

5.7 Staff List & ID Cards

The Staff List sub-tab shows all staff members with their role, status (Active / On Leave / Suspended), and key earnings summary. Tap any staff member to view their full profile including all work logs, payments, and leave history.

Staff ID Card: Admins can generate and print a formatted Staff ID Card for any staff member. The card shows the staff member's name, role, ID number, and company name — suitable for printing and laminating.

5.8 Warnings & Disciplinary Records

Admins can record formal warnings against staff members from the Staff Detail view. Each warning records the date, reason, severity, and any notes. Warning history is visible in the staff member's profile and can be referenced when making HR decisions.

5.9 Roles & Rates

Define job roles and their associated tasks and pay rates. Each role can have multiple tasks (e.g. a "Porter" role might have tasks: "Off-loading" and "Loading", each with a pay rate per bag, trip, hour, ton, day, or a custom unit).

Rate Unit	Use Case
Per Bag	Standard for depot porters and loaders.
Per Trip	Transport or delivery drivers.
Per Hour	Security guards, casual hourly workers.
Per Ton	Bulk commodity handlers.
Per Day	Fixed daily-rate staff.
Custom Unit	Any other unit you define (e.g. "Per Pallet").

■ Pay rates are per-unit. MDM calculates earnings automatically when you enter a quantity in the work log.

SECTION 6 — Contacts Tab

The Contacts tab is a built-in address book and balance tracker for your suppliers and customers. All contacts are synced to the cloud and available across devices.

6.1 Suppliers

Field	Description
Name & Contact Person	Supplier company name and the individual to contact.
Phone & Email	Contact details.
Address	Physical or postal address.
Tax Number	TPIN or VAT number for invoicing.
Bank Details	Banking information for payments.
Payment Terms	e.g. Net 30, Cash on Delivery.
Lead Time (Days)	Expected delivery lead time. Shown in Supplier Performance.
Category	Classify the supplier (e.g. Commodity, Fuel, Stationery).
Rating	1–5 star rating for supplier performance.
Notes	Any additional information.

6.2 Customers

Customer records use the same fields as suppliers minus supplier-specific fields (lead time, bank details). Customers can be linked to issued stock/inventory records to track what is owed.

6.3 Balance Tracking

When a receive record (Inventory or Commodity) is linked to a supplier and marked as Credit, the outstanding amount is reflected as a payable balance on the supplier's contact record. Similarly, issued records linked to customers and marked as Credit show as receivable balances. This gives you a live view of what you owe and what is owed to you.

6.4 Supplier Performance

The Supplier Performance sub-tab analyses your purchasing history to show, per supplier: total orders, total value, average lead time vs expected lead time, and an on-time delivery score. Use this to evaluate and compare suppliers over time.

SECTION 7 — Books Tab

The Books tab is a built-in document creator. Use it to write notes, financial memos, custom logs, or maintain spreadsheets — all stored inside the app and synced to the cloud.

7.1 Creating a Document

Step	Action
1 — Tap + New Document	Choose either Word Document (rich text) or Spreadsheet (grid).
2 — Enter a Title	Give your document a clear name. It will be saved with that name.
3 — Write Content	For Word docs: type and format text using bold, italic, and heading buttons. For spreadsheets: tap cells to enter values or formulas (beginning with =).
4 — Save	Tap the Save button. Your document is stored inside the app and synced to the cloud.

7.2 Spreadsheets

The spreadsheet editor provides a grid of rows and columns with a formula bar at the top. You can add more rows and columns as needed. Navigate between cells using the keyboard or by tapping. Enter a formula by starting with = (e.g. =SUM(A1:A10)). Formula cells are highlighted. Supported formula functions include SUM, AVERAGE, MIN, MAX, COUNT, IF, and basic arithmetic.

7.3 Downloading Files

Document Type	Download Format
Word Document	Downloads as a .docx file that opens directly in Microsoft Word, Google Docs, or any compatible word processor.
Spreadsheet	Downloads as a .csv file that opens in Microsoft Excel, Google Sheets, or any spreadsheet app.

■ Only Admins can delete documents. All users can view and edit documents they have access to.

SECTION 8 — Reports

MDM includes several built-in reporting tools accessible from the Dashboard and individual tabs.

8.1 Print Period Summary

Available from the Dashboard via the Print Summary quick-action button. Select a month and year to generate a comprehensive, printable summary report covering:

Section	Contents
Commodities	Total received, issued, and stock balance for each commodity in the period.
Inventory	Total received, issued, and balance for general inventory items.
Staff	Total gross earnings, deductions, net earnings, and payments per staff member.
Financial Overview	Combined revenue, costs, and gross profit across all commodities and inventory.

The report opens in a print-ready window. Tap Print or use your browser's print function to print or save as PDF.

8.2 CSV Export

Most data tables in MDM can be exported as CSV files for use in Excel, Google Sheets, or other tools. Export buttons appear within each tab. Available exports:

Export	Location
Inventory Received	Inventory tab → Received sub-tab
Inventory Issued	Inventory tab → Issued sub-tab
Inventory Summary	Inventory tab → Summary sub-tab
Commodity Received	Commodities tab → Received sub-tab
Commodity Issued	Commodities tab → Issued sub-tab
Commodity Variance	Commodities tab → Variance sub-tab
Staff Work Logs	Staff tab → Logs sub-tab
Staff Payments	Staff tab → Payments sub-tab
Staff Leave Log	Staff tab → Leave sub-tab
Staff Earnings	Staff tab → Earnings sub-tab
Staff Roster	Staff tab → Roster sub-tab

8.3 Audit Log

MDM automatically records every Create, Edit, and Delete action performed in the app — who did it, when, and what changed (including the before-state for edits). Admins can view the Audit Log from Settings → Data Management →

View Audit Log. The log can also be exported as a CSV file.

8.4 Payslip Generator

From Staff → Earnings, tap Generate Payslip for any staff member and select a pay period (month/year). MDM produces a formatted payslip showing earnings by task, deductions by reason, gross pay, net pay, total paid to date, and outstanding balance. The payslip opens in a print-ready window.

SECTION 9 — Settings

The Settings tab is only accessible to Admins (except Display Preferences, which all users can access). It contains all configuration options for your account.

9.1 Company Information

View your company name, district, country, and License Key. The License Key is your unique identifier — note it down and share it when making a payment. Company details are read-only after initial setup (contact support to change).

9.2 Display Preferences

Setting	Description
Text Size	Adjust app text size using the A– / A+ buttons. Changes apply instantly and are saved across sessions. A "Reset to Default" button restores 100%.
Theme	Choose between Dark, Light, or Auto. Auto follows your device's system setting.
Currency	Enter any currency code or symbol (e.g. ZMW, USD, KES, K, \$). Updates all financial figures instantly.
Standard Shift Hours	(Admin only) Number of hours in a standard shift (default: 8). Work log sessions exceeding this duration are flagged with an OT indicator.

9.3 Staff & Records Policy

Setting	Description
Annual Leave Entitlement	Days each staff member is entitled to per year (default: 15).
Record Edit Window	How long after entry an Admin can edit or delete a record. Options: 6h, 12h, 24h (default), 48h, or 72h. After this window, records become permanent.
Auto-Logout After Inactivity	Configurable inactivity timeout with a warning before logout.

9.4 User Accounts & Role Permissions

Add, edit, or deactivate user accounts. Set usernames, passwords, and roles (Admin / Manager / Staff). A built-in Role Permissions table shows a feature-by-feature breakdown:

Feature	Admin	Manager	Staff
Add records	✓	✓	✗
Edit / Delete records	✓	✗	✗
View dashboards	✓	✓	✓
Set pay rates	✓	✗	✗
Manage commodities	✓	✗	✗

Feature	Admin	Manager	Staff
Manage inventory items	✓	✗	✗
Access Settings	✓	✗	✗
Change own password	✓	✓	✓
View own earnings	✓	✓	✓
Generate payslips	✓	✗	✗
Export CSV	✓	✓	✗
View Audit Log	✓	✗	✗

■ Up to 3 users on the free tier. Additional users may require a higher subscription tier.

9.5 Cloud Sync

Feature	Description
Last Sync Time	Displayed on the Cloud Data Protection card in Settings.
Sync Now	Tap to force an immediate sync to secure cloud storage.
Test Connection	Diagnoses connectivity issues with the cloud service.
Per-Tab Cloud Upload/Download	Each main tab has cloud upload and download buttons for targeted tab-level sync.

9.6 License & Subscription

View your current license status and the days remaining in your trial or subscription. Payment instructions are shown here. See Section 12 for full payment details.

9.7 Data Management

Feature	Description
Export Backup	Download a full backup of all app data to your device.
Restore Backup	Import a previously exported backup file to restore data.
Export Audit Log	Download the audit log as a CSV file.
View Audit Log	Browse all Create/Edit/Delete actions recorded in the app.
Clear All Data	Permanently erases all local data. Irreversible — use with caution. Requires Admin password confirmation.

Other Settings

Setting	Description
Recovery PIN	Set a numeric PIN for admin password recovery from the login screen.
Recovery Email	Set a recovery email address as an alternative password reset method.
Deduction Reasons	Manage the list of selectable reasons when recording staff deductions.
Commodities	Add, rename, or remove commodity types. No default commodity — Admin must define all.
Manage Inventory Items	Pre-define item names, minimum stock thresholds, and reserved quantities.
Biometric Setup	Register or remove fingerprint/face unlock for your account.
Help & Documentation	Download the User Manual PDF directly from within the app.
Terms of Service	View the full Terms of Service and Disclaimer.

SECTION 10 — Offline Mode & Cloud Sync

MyDepotMaster is designed to work fully offline. You can record stock, log work, and do everything the app offers without any internet connection. Your data is saved locally on your device.

How Sync Works

Feature	Description
Local Storage	All data is saved to your phone's storage instantly on every entry. No internet needed.
Cloud Backup	When online, MDM syncs your data to secure cloud storage automatically within a few seconds of any change.
Offline Queue	If you make changes while offline, MDM queues them and uploads everything when you reconnect.
New Device	Logging in on a new phone with your existing License Key automatically restores your cloud data.
Sync Indicator	The pill in the top-right corner shows: Synced (green), Online (blue), Offline (amber), or error.
Per-Tab Sync	Each tab has dedicated cloud upload and download buttons for targeted sync operations.

Offline Grace Period

If MDM cannot reach the cloud to verify your license (e.g. no internet for several days), it will continue to work normally for a limited period using your cached license. After an extended offline period without a successful license check, the app enters read-only mode.

■ Connect to the internet regularly to keep your license cache current and ensure all offline data is backed up to the cloud.

SECTION 11 — Security Features

MDM includes several layers of security to protect your business data.

Feature	Description
Password Hashing	All passwords are securely hashed before storage. Plain-text passwords are never saved.
Brute-Force Protection	Accounts are temporarily locked after repeated failed login attempts. Recovery attempts have a separate, independent throttle.
Auto Logout	Automatic logout after the configured inactivity period. A warning is shown before logout.
Session Tokens	Each login session uses a unique token that expires on logout.
Admin Password Re-Prompt	Destructive actions require the Admin to re-enter their password even when already logged in.
Role Enforcement	Access restrictions are enforced inside every function — not just in the UI.
Read-Only Mode	Expired or suspended accounts enter read-only mode — data can be viewed but not changed.
License Integrity	License data is signed to detect unauthorised tampering.
XSS Sanitisation	All user-entered text is sanitised before rendering to prevent injection attacks.
Recovery PIN	Set a Recovery PIN in Settings to allow safe admin password reset without contacting a third party.
Audit Trail	Every Create, Edit, and Delete action is logged with timestamp, user, and before/after data.

11.1 Biometric Login

MDM supports device biometrics (fingerprint or face unlock) using industry-standard protocols. Once registered under Settings → Security, a fingerprint icon appears on the login screen. Biometric credentials are stored on your device only — they are never transmitted to any server.

11.2 Brute-Force Protection

Login attempts and password recovery attempts each have independent throttles. After repeated failed attempts the account is temporarily locked. Recovery attempts also lock after repeated failures, preventing automated attacks on the recovery flow.

11.3 Audit Trail

The Audit Log records every data-changing action: who performed it, the timestamp, the affected record, and the before-state for edits. The log is exportable as CSV. Access is Admin-only.

11.4 Admin Password Re-Prompt

Before any destructive or sensitive action (deleting records, resetting user passwords, clearing all data), MDM requires the Admin to re-enter their password. This prevents an unattended, logged-in device from being misused.

■ Always set a Recovery PIN (Settings → Recovery PIN) immediately after first setup. Without it, a forgotten Admin password cannot be self-recovered.

SECTION 12 — Subscription & Payment

MDM offers a 1-month free trial with full access to all features. After the trial, a subscription is required to continue using the app.

Subscription Plans

Plan	Price	Details
Free Trial	Free	Full access for 1 month. No credit card required. Starts immediately on registration.
Monthly	K100/month	Full access to all features. Renew each month via mobile money.
Annual	K1,000/year	Save K200 — 12 months for the price of 10. Recommended for active businesses.

How to Pay

Step	Action
1 — Find your License Key	Go to Settings → License. Your key is in the format MDM-XXXX-XXXX-XXXX.
2 — Send Payment	Send the subscription amount via Airtel Money (+260 970 962 902) or MTN Mobile Money (+260 960 271 128).
3 — WhatsApp Confirmation	Send a WhatsApp message to the developer (+260 960 271 128) with your License Key and payment confirmation (screenshot or transaction ID).
4 — Activation	Your account will be activated within a few hours. The app status will update to Active automatically on next sync.

License Statuses

Status	Meaning
Pending Approval	New registration is being processed.
Trial	Active free trial. Days remaining shown in the app banner.
Trial Grace	Brief grace period after trial expiry to arrange payment.
Active	Valid paid subscription.
Expired Grace	Brief grace after subscription end — continued access while you renew.
Read-Only	Trial or subscription fully expired. Data can be viewed but not edited.
Suspended	Account suspended by administrator. Contact support.

SECTION 13 — Troubleshooting

Question	Answer
I forgot my Admin password.	On the login screen, tap "Forgot Password?" and use your Recovery PIN or recovery email to reset it. If neither was set up, contact the developer via WhatsApp.
The app shows "Read-Only Mode".	Your trial has expired or your subscription has lapsed. Go to Settings → License to view your status and follow the payment instructions to reactivate.
My data is missing after switching phones.	Log in with the same username and password on your new phone. The app will automatically restore your data from the cloud. Ensure you are connected to the internet on first login.
The app is not syncing to the cloud.	Check your internet connection. In Settings, tap "Sync Now" to force a sync. If the issue persists, tap "Test Connection" to diagnose.
Stock balance shows a negative number.	More items have been issued than received. Check for data entry errors in the Issued records and ensure all received stock has been recorded.
A staff member's earnings look wrong.	Check that the pay rate in Settings → Staff Roles & Rates is correct for their role and task. Also check for any unintended deductions in the work log.
I cannot delete a record.	Only Admins can delete records. Also, records can only be deleted within the configured edit window. If neither applies, check your user role in Settings → User Accounts.
The app is slow or not loading.	Try refreshing the page. If you installed the app (PWA/APK), clear the app cache in your phone settings and reopen. To get the latest version, revisit the landing page at rebrand.ly/mydepotmaster in Chrome.
I see "Setup Incomplete" after login.	An Admin must log in and complete the Company Setup before other users can use the app.
I cannot find the license key.	Go to Settings (Admin only) → License & Subscription. Your key is shown at the top in MDM-XXXX-XXXX-XXXX format.
The Commodities tab is empty.	You need to add at least one commodity first. Go to Settings → Commodities and add your commodity (e.g. Maize).
Currency shows blank or wrong.	Go to Settings → Display Preferences → Currency and enter your currency code or symbol. Tap Save.
I cannot see the Manage button in Inventory.	The Manage button is only visible to Admin users. Log in as Admin to define inventory item names.
The theme keeps reverting.	Go to Settings → Display Preferences → Theme and choose Dark or Light to override the Auto (device) setting permanently.

Question	Answer
I edited a record but changes are not saving.	The record edit window may have expired (default: 24 hours). After this window, records are permanent. The duration is configurable in Settings → Staff & Records Policy.
Expiry alerts are not showing.	Ensure you have entered an Expiry Date on inventory receive records. Alerts fire for items expiring within 30 days or already expired.
Low stock alerts not appearing.	Go to Settings → Manage Inventory Items and set a Minimum Stock Threshold for the item. Alerts only fire if a threshold is configured.
Biometric login button not showing.	Your device may not support biometric login, or biometrics have not been registered. Go to Settings → Security → Register Biometrics.
CSV export is empty.	Ensure there are records in the selected period. Change the period filter to "All Time" to confirm data exists.
Supplier balance doesn't match my records.	Supplier balances are calculated from inventory receive records linked to that supplier and marked as Credit. Check that receive records are correctly linked and have the right payment status.
